Stacking height	10 cm

- Floor unevenness can be leveled out
- Suitable for outdoor use
- Easy handling
- Area can be extended
- Accessories such as railings and stairs

#### Exemplary representations / design varieties

The Mott Chill-Out flooring offers a pleasant feel-good atmosphere outdoors and consists of decking strips in chocolate brown, anthracite and light gray. The high-quality composite material is splinter-free, resistant to insects and fungi and does not develop the typical wood cracks. It requires no additional surface treatment and is easier to maintain than wooden decking, with a longer lifespan. The decking can be easily cleaned with water or a high-pressure cleaner. Another advantage: no visible screw connections on the surface ensure a clean look.

## The modular relaxation zone

The outdoor area in summer is the most important sales driver for many restaurants. Especially in city center locations, it is often a great challenge to set up a stylish terrace area, particularly without the approval procedure. With the modular terrace by Mott, the desire for a relaxation zone is quickly fulfilled. A static calculation is not required. The new “Chill Out” outdoor flooring by Mott immediately creates a special kind of feel-good atmosphere.

## Suitable for all kinds of events

Thanks to the individual elements this terrace can be extended as required. Quick connectors are used to securely connect the individual terrace elements to each other. There are also almost no limits to the height - this is determined individually.
